

Run the whole window-cleaning business from one map.

Turn doorsteps and inbound calls into tracked leads. Drop a pin on a house, win the work, send a crew, get paid – on your desktop or your phone. Built for window cleaning, not bent from a generic CRM.

TO RUN MVP*

01 Why build it

Generic CRMs don't understand window cleaning: they can't price by pane count, stories, or screens, don't map a neighborhood, don't let crews claim jobs, and don't model repeat service. Today it's spreadsheets and a buggy hand-built tool. ClearView fixes exactly that – one place to see the neighborhood, win work, dispatch crews, and get paid, with the money numbers visible only to the owner.

02 Who uses it – and what they can see

CAPABILITY	ADMIN (OWNER)	REP (SALES)	CLEANER (FIELD)
See revenue, prices, invoices	✓	✗	✗
Dashboard	✓ w/ money	✓ no money	✓ no money
Map – drop pin / create lead	✓	✓	view only
Leads pipeline	✓	✓	✗
Jobs – claim & update	✓	view	✓ own
Invoices	✓	✗	✗
Users & settings	✓	✗	✗

HARD RULE Money visibility and job-claim locking are enforced in the database, not just hidden in the screen – so they can't be bypassed.

03 What it does

Live neighborhood map

Click a house → drop a colored pin (won / lost / follow-up / new) → it creates a lead. Click any pin to open its lead. Pin ⇄ lead, two-way linked.

Leads pipeline

Drag cards across New → Follow-up → Won → Lost. Dropping into Won automatically creates a job.

Jobs your crew claims

Cleaners claim a job and it locks to them – nobody else can take it. Track Unclaimed → Claimed → In progress → Done.

Customers, connected

Every customer's full history – jobs, invoices, leads – in one profile. Search a name and see a card with phone + address to pick the right person.

Invoices & PDF

Build an invoice from a job, print it to PDF, mark it paid. Revenue rolls up on the dashboard – owner only.

Dashboard & export

Revenue, jobs, win rate, overdue invoices, a live map snapshot. Export any list to Excel.

04 How the pieces connect

One customer holds many leads, jobs, and invoices. A lead becomes a job when won; a finished job becomes an invoice. Nothing is a dead end – every record links back to the customer and forward to its next step.

05 On the phone

Now — installable app (PWA) PHASE 1

One tap adds ClearView to the home screen with its own icon, full-screen, works on any phone. No app store, no fees. Reps and cleaners are in the field on day one.

Later — native app PHASE 2

A real iOS/Android app for crews: before/after photos, GPS routing, solid offline. Shares the same code, added when the field features earn the store fees.

06 Rollout in three phases

PHASE 1 · MVP

Run the business

- Roles + login
- Customers
- Map + pins
- Leads pipeline
- Jobs + claiming
- Invoices + PDF
- Dashboard + export
- Installable PWA

PHASE 2 · FIELD

Crews & repeat work

- Recurring "due again" service
- Before/after photos
- Today's route
- Native mobile app
- Weather flag · tags

PHASE 3 · GROWTH

Money & automation

- Online payments
- Email invoices · tax · deposits
- Customer self-booking
- Reminders/notifications
- Reporting

07 What it costs to run

PIECE	COST	NOTES
Database + login (Supabase)	Free	Paid ~\$25/mo only when you scale up
Map (Mapbox)	Free	~50k map loads / month included
Web hosting	Free	Cloudflare Pages / Netlify
Installable app (PWA)	Free	No app store fees
Domain name	~\$12/yr	The one fixed cost
Native app (Phase 2)	\$99/yr + \$25	Apple yearly, Google one-time - only if/when we go native

* MVP runs essentially free – just a domain. Native app is the only thing that later forces store fees.

08 What "done" looks like (MVP)

A rep drops a pin, creating a lead on the map and in the pipeline. Dragging it to Won spins up a job; a cleaner claims it and it locks to them. The owner builds an invoice from that job, prints a PDF, marks it paid – and watches revenue update on a dashboard that reps and cleaners can't see the money on. Every list exports to Excel. The whole thing installs on a phone.
